

RENYU ZHANG

Computer Science undergraduate at the University of Strasbourg, France, with systematic training in algorithms, databases, software engineering and core CS courses. Solid theoretical foundation and hands-on engineering experience. Led a database system design project and participated in collaborative development. Fluent in Chinese, English and French, with strong cross-cultural academic communication skills.

SKILLS

- Engineering: Python, Java, C#, Oracle, SQL and PL/SQL; experience in database design, frontend development and system implementation.
- Academic: rigorous logical thinking; able to deliver the full process from requirements analysis to system release; strong self-learning and problem-solving ability.
- Collaboration: experience in multi-person projects; able to own key modules and coordinate communication effectively.
- Design: skilled in Figma for wireframes, high-fidelity prototypes and interactive drafts that support development collaboration.
- AI tools: proficient with Claude, Codex and ChatGPT; able to build websites and complete projects independently.

LANGUAGES

- Chinese: Native
- English: Fluent (IELTS 6.0)
- French: B2 (study and daily life)

P

PROJECT EXPERIENCE

Multiplayer Domino Board Game Development 2026

- Frontend Design and Development | React, TypeScript, Tailwind CSS, Vite, Monorepo, Docker, Figma
- Participated in the development of a multiplayer online Domino game, covering requirements analysis, prototype design and frontend-backend integration.
 - Created UI designs and interactive prototypes in Figma for the game board, tile display and player operation areas.
 - Built the frontend with React, TypeScript and Tailwind CSS, implementing tile rendering, drag-and-drop interaction, placement validation and turn switching.
 - Worked with backend teammates on API integration and state synchronization; used WebSocket logic to support smooth real-time multiplayer gameplay.
 - Used Vite for development and testing, managed the project with a Monorepo structure and unified the development/deployment environment with Docker.

Database System Design and Implementation 2025

- Oracle / SQL / PL-SQL
- Designed and implemented a relational database system for data management on an image-sharing platform.
 - Built conceptual E-R and relational models covering users, images, categories, comments, likes and other core business data.
 - Wrote SQL scripts for table creation, constraints and test-data insertion; used keys and check constraints to ensure consistency.
 - Implemented triggers for data archiving, business restrictions and abnormal behavior control.
 - Created statistical and analytical SQL queries for business analysis and summaries; improved stability and query efficiency with indexing and transaction management.

Jardin d'Asie Restaurant 2024

- Administrative and Information Support
- Organized and standardized menu and business information to ensure clear, accurate and usable content.
 - Assisted with online-system content updates and routine information maintenance to keep data timely and consistent.
 - Supported daily administrative work, including information coordination, document organization and process support.
 - Collaborated with team members in a multitasking environment to improve information flow and handoff efficiency.

W

INTERNSHIP EXPERIENCE

Shuyuan Branch, Chengdu Administration for Market Regulation 2024

- Data Management Assistant
- Managed market complaint and related business data end to end, including collection, structuring and system entry; established standardized input rules.
 - Classified, cross-checked and maintained entered data, identified anomalies and reduced errors, improving data usability and query efficiency.
 - Supported periodic data updates and version management according to established workflows, ensuring real-time accuracy and cross-department consistency.
 - Participated in cross-department data collaboration, summarized multi-source business data, completed basic statistical analysis and produced reports for management decisions.
 - Handled sensitive data involving citizen complaints and market-entity information under strict confidentiality rules, with no information-security incidents.

E

EDUCATION

- University of Strasbourg, France** B.Sc. in Computer Science
UESTC + ESIGELEC Rouen M.Sc. in Software Engineering
